

WHAT WE DO

Mouse Free's unique formula stops the entry of mice into your RV. We stop mice and other pests from entering through the small holes and cavities on the under side of your motorhome or trailer.

HOW WE DO IT

Simply put, a lubricating non drip coating scented with 100% natural essential oils is applied to the entire undercarriage of your RV. This provides two very unique ways to repel mice:

- 1. Mice have a very acute sense of smell. The scent of natural essential oils are overwhelming to mice, and drive them away.
- 2. The non drip oily coating is much too slippery to travel across. The coating is impassable by any mouse, squirrel, or insect – even ants! If it doesn't have wings, we keep them out!

The product works so well at preventing mice from entering your trailer or motorhome, that we named our product **The Expeller™**
Canada and U.S patent pending on composition and process.

NO DRIP  | **NO MESS** | **NON-TOXIC** 

WE STAND BEHIND OUR PRODUCT AND OUR DEALERS WITH A **LIFETIME WARRANTY***

Pricing for Trailers & Motorhomes

\$10.00 / Linear Ft.

Does your wife think mouse proofing is worth it?

She will say **"ABSOLUTELY!** It is the most important thing! I won't step foot inside the RV until I know it is mouse-free! It also saves us hours of cleaning and disinfecting after we find mouse droppings. Not to mention the damage they can cause by chewing on the electrical wiring".

FACTS

Trailers and motorhomes sit unattended for long periods when not in use. They become inviting targets for mice, squirrels and insects to take over and claim as their own.

Testimonials

Those mice drove me crazy! We almost quit RVing altogether. Every time we started packing to leave, there were droppings everywhere! I tried everything I could find. Then I found out my RV service center had this new product Mouse Free. I was sceptical at first, but it looked good enough to try once. I could not believe it, the stuff really works! We even leave our pantry full of food, and not a trace of those pesky critters!!!

DAVE – SOUTH CAROLINA, USA

I own a late model diesel pusher. It's our pride and joy. We keep up with all the regular maintenance requirements because we want to protect our investment. But, the damage that mice could do to our unit never crossed our mind until we had them living in the basement storage, chewing on everything - and what a smell! We set traps to catch them right away and had our local RV Dealer do your mouse proofing treatment to the undercarriage. So far so good! Thanks so much Mouse Free!

STEVE - ONTARIO, CANADA

Rodents work their way in through holes made to accommodate water, sewer, propane pipes and power lines underneath the motorhome.

Among the top five RV insurance claims are damage caused by rodent infestations. The mice chew through electrical wires rubber and plastic hoses, completely disabling the motorhome.

Mice can carry disease. Hantavirus, a particularly dangerous disease carried by deer mice, can be breathed in while cleaning up mouse droppings.

MICE REPELLENT STRATEGIES

Mice Repellents	Pros	Cons
Mouse Trap	Effective at killing mice that made it inside	Does not prevent entry. Considered inhumane.
Poison	Effective at killing mice that made it inside	Does not prevent entry & can kill pets/animals
Moth Balls	Effective in small spaces	Does not prevent entry * Known to California to cause cancer *
Scented Dryer Sheets	Works on very small scale	Scent only lasts a few weeks & can be carried away
Steel Wool stuffed in access holes	Works on very small scale	Will rust & falls out while driving Difficult to find accessholes
Cotton Balls scented with peppermint	Works on very small scale	Scent only lasts a few weeks End up using as nesting material
	Prevents entry. Humane. No trace to be seen!	Will only work if you purchase the treatment!

"RVing should be stress-free, worry-free and of course...

MOUSE FREE!"
